

## Black Oats - Common Vetch - Berseem Clover Combination

PANAM's Genetic – Registered on French catalog  
*Luxurial Avena Strigosa schreb (50%) - Vicia sativa (40%) - Trifolium alexandrinum (10%)*

### CARACTERISTICS

- Rapid and competitive growth
- low water requirements
- Very good palatability and digestibility
- Better fodder quality than Black Oat + Vetch combination
- Clover + Vetch provide better biomass production
- Improve soils structure
- Luxurial is acting as a catch crop for nitrogen
- Premium product having additional soil conditioning benefits due to the inclusion of berseem clover
- Production of important dry matter
- Important allelopathic effect which helps to reduce weeds
- Recognized nematicide effect
- No depressive effect on maize production
- Superior economic advantage, even when the cover crop is not collected as green or grazed fodder.

### MANAGEMENT TIPS

- Sowing density : Cover crop : 25 kg per hectare  
Fodder crop: 35 kg per hectare
- Implantation : Drill at depth of 1- 2.5cm  
Roll to provide good seed bed
